Blood 82:150-1516(1993).
-!- FUNCTION: Brythroppietin is the principal hormone involved in the regulation of erythrocyte differentiation and the maintenance of a physiological level of circulating erythrocyte mass.
-!- SUBCELUTAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Produced by kidney or liver of adult mammals and by liver of fetal or neonatal mammals.
-!- SIMILARITY: Belongs to the EPO / TPO family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9 APPRLICDSRVLERYLLEAKEAENITTGCAEHCSLNENITVPDTKVNFYAWKRMEVGQQA

T "Cloning of a cDNA encoding bovine erythropoietin in the regulation. In selected tissues.",

Gene 171:275-280(1996).

T "FUNCTION: Erythrocyte differentiation and the maintenance of a physiological level of circulating erythrocyte mass.

C Physiological level of circulating erythrocyte mass.

T SUBCELULAR LOCATION: Secreted.

C -- TISSUE SPECIFICITY: Produced by kidney or liver of adult mammals and by liver of feat or neonatal mammals.

C -- SIMILARITY: Belongs to the EPO / TPO family.

FUNCTION: Erythropoletin is the principal hormone involved in the
regulation of erythrocyte differentiation and the maintenance of
physiological level of circulating erythrocyte mass.
                                                                                                                                                                    -:- SUBCELLUIAR LOCATION: Secreted.
-:- TISSUE SPECIFICITY: Produced by kidney or liver of adult mammals and by liver of fetal or neonatal mammals.
-:- SIMILARITY: Belongs to the EPO / TPO family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

Encludiak J., Goodman M., Bunn H.F.;

Encludiak J. Struction and Tracy T.E., Gruninger R.H., Mulcahy L.S.,

Encludiation Server-function relationships: high degree of a requestion of erythrocote differentiation and the maintenance of a physiological level of circulating erythrocyte mass.

C. I- FUNCTION: Erythropoietin is the principal hormone involved in the regulation of erythrocyte differentiation and the maintenance of a physiological level of circulating erythrocyte mass.

C. I- SUBCELLULAR LOCATION: Secreted.

C. I- TISSUE SPECIFICITY: Produced by kidney or liver of adult mammals and by liver of fetal or neonatal mammals.

C. I- SIMILARITY: Belongs to the EPO / TPO family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright. WPI; 2002-566640/60.

Novel conjugate of erythropoietin glycoprotein with polyethylene glycol, useful for treating diseases correlated with anemia in chronic renal failure patients and acquired immunodeficiency syndrome.

Disclosure, Page 39; 40pp; English.

The present sequence represents a modified human erythropoietin (EPO) protein. The BPO was extended at the N-terminal by a proteolytic cleavage site. It was used to produce conjugates of the invention. The

specification describes a conjugate comprising an EPO glycoprotein having
          an N-terminal alpha-mailno group, chosen from human EPO (hEPO) or its analogues (where hEPO is modified by addition of 1-6 glycosylation sites or a rearrangement of a glycosylation site). The glycosylation sites covalently linked to a poly(ethylation site). The glycoprotein is bas in vivo biological activity of causing bone marrow cells to increase production of reticulocytes and red blood cells. The conjugate increased circulating half-life and plasma residence time, decreased clearance, compared to unmodified EPO. The EPO conjugate is useful for preparing medicaments for the treatment and prophylaxis of diseases correlated with anomenia in chronic renal failure patients (CRF), acquired numdergoing chemotherapy. It is also useful for treating patients by stimulating the division and differentiation of committed erythroid
                                                                                                                                                                                                                                                                                                                                                                                  09
                                                                                                                                                                                                                                                                                                                                                                                                                     9

The present sequence represents a modified human erythropoietin (EPO)

protein. The EPO was extended at the N-terminal by a proteolytic cleavage
site. It was used to produce conjugates of the invention. The
specification describes a conjugate comprising an EPO glycoprotein having
an N-terminal alpha amino group, chosen from human EPO (hEPO) or its
analogues (where hEPO is modified by addition of 1-6 glycosylation sites
or a rearrangement of a glycosylation site). The glycoprotein sites
or are rearrangement of a glycosylation site). The glycoprotein sites
or are invivo biological activity of causing bone marrow cells to increase
production of reticulocytes and red blood cells. The conjugate increased
circulating half-life and plaama red blood cells. The conjugate increased
circulating half-life and plaama red blood cells. The conjugate increased
circulating half-life and plaama red blood cells. The conjugate increased
circulating the file EPO. The EPO conjugate is useful for preparing
medicaments for the treatment and prophylaxis of diseases correlated with
anaemia in chronic renal failure patients (CRF), acquired
compared to windome (AIDS) and for treating cancer patients
cundergoing chemotherapy. It is also useful for treating patients by
stimulating the division and differentiation of committed erythroid
compared to the properties of committed erythroid
compared to marrow
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Burg J,
Wozny M;
The present sequence represents a modified human erythropoietin (EPO)

protein. The EPO was extended at the N-terminal by a proteolytic cleavage

site. It was used to produce conjugates of the invention. The

specification describes a conjugate comprising an EPO specification describes a conjugate comprising an EPO specification having

an N-terminal alpha-amino group, chosen from human EPO (hEPO) or its

an N-terminal alpha-amino group, chosen from human EPO specification sites

or a rearrangement of a glycosylation site). The glycopyrotein is

covalently linked to a poly(ethylene glycol) group. The EPO glycoprotein

covalently linked to a poly(ethylene glycol) group. The EPO glycoprotein

covalently linked to a poly(ethylene glycol) group. The EPO glycoprotein

covalently linked to a poly(ethylene glycol) group. The EPO glycoprotein

covalently linked to a poly(ethylene glycol) group. The EPO glycoprotein

covalently linked to a poly(ethylene glycol) group. The EPO glycoprotein

covalently linked to a poly(ethylene glycol) group. The EPO glycoprotein

covalently linked to a poly(ethylene glycol) group.

covalently linked to a glycological group.

The present sequence represents a modified human erythropoietin (BPO)

Strotein. The EPO was extended at the N-terminal by a proteolytic cleavage

site. It was used to produce conjugates of the invention. The

specification describes a conjugate comprising an EPO specification describes a conjugate comprising an EPO specification describes a conjugate comprising an EPO specification are specification describes a conjugate comprising an EPO specification by addition of 1-6 specification sites

or a rearrangement of a glycosylation site. The glycosylation sites

or a rearrangement of a glycosylation site. The glycopylation sites

or a rearrangement of a glycosylation site. The glycopylation sites

covalently linked to a poly(ethylene glycol) group. The EPO glycoprotein is

covalently linked to a poly(ethylene glycol) group. The EPO glycopylation sites

covalently linked to a poly(ethylene glycol) group. The EPO conjugate increased

circulating half-life and plasma residence time, decreased clearance,

circulating half-life and plasma residence (ERE), acquired

medicaments for the treatment and prophylaxis of diseases correlated with

CC protein. The EPO was extended at the N-terminal by a proteolytic cleavage site. It was used to produce conjugates of the invention. The EPO was extended conjugate comprising an EPO glycoprotein having an N-terminal alpha-amino group, chosen from human EPO (BEDO) or its analogues (where hEPO is modified by addition of 1-6 glycoprotein is covalently linked to a poly(ethylene glycol) group. The EPO glycoprotein of as in vivo biological activity of causing bone marrow cells to increased correlation of reticulocytes and red blood cells. The conjugate increased circulating half-life and plasma residence time, decreased clearance, increased clinical activity in vivo, improved potency and stability, when compared to unmodified EPO. The EPO conjugate is useful for preparing medicaments for the treatment and prophylaxis of diseases correlated with anamania in chronic remal failure patients (CRF), acquired immunosficient elements of correlated with confidence of the EPO supply of the EPO supplying cancer patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel conjugate of erythropoietin glycoprotein with polyethylene glycol, useful for treating diseases correlated with anemia in chronic renal failure patients and acquired immunodeficiency syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             undergoing chemotherapy. It is also useful for treating patients stimulating the division and differentiation of committed erythroid progenitors in the bone marrow
                                                                                                                                                Human, erythropoietin, EPO; glycoprotein, reticulocyte production, red blood cell production; anaemia; chronic renal failure; acquired immunodeficiency syndrome; AIDS; cancer; bone marrow;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tischer W;

The present sequence represents a modified human erythropoietin (EPO) protein. The EPO was extended at the N-terminal by a proteolytic cleavage site. It was used to produce conjugates of the invention. The specification describes a conjugate comprising an EPO 91ycoprotein having an N-terminal alpha-amino group, chosen from human EPO (hEPO) or its analogues (where hEPO is modified by addition of 1-6 glycosylation sites or a rearrangement of a glycosylation site). The glycoprotein is covalently linked to a poly(ethylene glycol) group. The EPO glycoprotein has in vivo biological activity of causing bone marrow cells to increase production of reticulocytes and red blood cells. The conjugate increased circulating half-life and plasma residence time, decreased clearance, increased clinical activity in vivo, improved potency and stability, when

A.

All of the Cys residues in the SQ are labelled "SH". Megakaryocyteplatelet growth factor contains human EPO as an active principle. Human EPO has a megakaryocyte colony-stimulating activity and increases the ratio of small acetyl cholinesterase posititive cell (SAchE+) which is

The invention comprises the amino acid and coding sequences of non-glycosylated erythropoietin (EPO) analogues, where the lysine at position

```
ö
45 and/or 116 has been replaced with an amino acid that cannot be pey/lated. The non-glycosylated EPO analogues of the invention are useful for treating anaemia. The present amino acid sequence represents a non-glycosylated EPO analogue with a modified protease B signal peptide. NOTE: The present sequence is included in the sequence listing as SEQ ID No 29, however another sequence on page 28 of the specification is also shown as SEQ ID No 29.
                                                                                                                                                                                                                                        120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This protein sequence given comprises the entire amino acid sequence of human erythropoietin (EPO). EPO leads to the maturation of erythrocytes and is therefore designated as a late myeloid differentiation factor.

(MDF). Within the scope of the invention hybrid molecules were produced which contain at least a portion of an early MDF and at least a portion of a late MDF covalently linked. The EPO sequence given is effective within the scope of the invention in full or in a truncated version. In: These compounds can be used to promote heamatopoiesis in a patient. The bonding of the early and late factors allows a very high conc. of late MDF at the surface of a cell which the early MDF is bound. It also allows the early MDA co act more specifically to stimulate only the desired lineage, thus reducing undesirable effects. These compounds are useful for treating anaemias of various origins egreen! Allows a molecular manner of the compounds are useful for treating anaemias of various origins egreen!

Multi-functional chimeric haematopoietic receptor agonist - useful to treat haematopoietic disorders, tumours, infections or autoimmune diseases.

Claim 1; Page 762; 841pp; English.

modified EPO amino acid sequence of the formula provided in AAW77780, in modified EPO amino acid sequence of the formula provided in AAW77780, in which the N-terminus is joined to the C-terminus directly or via a linker, the polypeptide having new C- and N-termin at one of the positions indicated. Novel claimed multi-functional chimeric positions indicated. Novel claimed multi-functional chimeric capture receptor agonists (see AAW77812-22) have the formula R1-L1 receptor agonists (see AAW77812-22) have the formula R1-L1 receptor agonist polypeptide (see AAW77782); (d) a modified human stem cell factor receptor agonist polypeptide (see AAW77782); (d) a modified human interleukin-3 polypeptide (see AAW77783); (e) modified human interleukin-3 polypeptide (see AAW77784); (f) modified human interleukin-3 polypeptide (see AAW77785); (d) a modified human interleukin-3 polypeptide (see AAW77784); (e) thush at least R1 or R2 is selected from (a), (b) or (c) as above. The cut that at least R1 or R2 is selected from (a), (b) or (c) as above. The multi-functional chimeric haematopoietic receptor agonist can be used to stimulate the production of haematopoietic cells in a patient, for the ex vivo expansion of haematopoietic cells in a patient, for the expansion of haematopoietic cells in the production of dendritic

The present sequence is human erythropoietin (EPO) mature protein. EPO has improved biological activity and an extended serum half life greater than 20 hours. The present invention relates to modified EPO forms such as fusion proteins comprising a FC portion of an immunoglobulin (Ig) molecule and an EPO molecule (FC-EPO). The FC portion is fused covalently through its C-terminus directly or indirectly to the EPO molecule, and where the FC portion as well as EPO portion may be modified or mutated. The invention also relates to non-fused EPO molecules which have a pattern of cysteines or disulphide bonding which is distinct from human of animal EPO. Paramaceutical compositions containing EPO are useful in the treatment of EPO deficient diseases such as anaemia, renal failure, HIV infection, blood loss and chronic disease that can be treated with haematopoietic growth factor

chronic renal failure; AIDS; cancer.

```
The present invention relates to a conjugate comprising, human erythropoietin glycoprotein (EPO) having at least one free amino group and having in vivo biological activity of causing an increase the production of reticulocytes and red blood cells, covalently linked to 1-3 lower-alkoxy poly(ethylene glycol) groups through a linker. The invention is useful for preparation of medicaments for the treatment of prophylaxis of disease correlated with anemia in chronic renal failure patients (CRF), AIDS and for the treatment of cancer patients undergoing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  64 VEVWQGLALLSEAVLRÇQALLVNSSQPWEPLQLHYDKAVSGLRSLTTLLRALGAQKEAIS 123

Fatent No. 5641663
GENERAL INFORMATION:
APPLICANT: GARVIN, Robert T.
APPLICANT: GARVIN, Robert T.
TITLE OF INVENTION: AN EXPRESSION SYSTEM FOR THE SECRETION
TITLE OF INVENTION: STIMULATIVE HUMAN GRANULOCYTE MACROPHAGE COLONY
TITLE OF INVENTION: PROTEINS FACTOR (GN-CSF) AND OTHER HETEROLOGOUS
TITLE OF INVENTION: PROTEINS FROM STREPTOMYCES
NUMBER OF SEQUENCES: 91
CORRESPONDENCE ADDRESS:
ADDRESSEE: Foley & Lardner
STREET: 1800 Diagonal Road, Suite 500
CITY: Alexandria
STATE: Virginia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 4, Application US/09552265B
Sequence 4, Application US/09552265B
Patent No. 6555343
GENERAL INFORMATION:
APPLICANT: DeSauvage, Frederick
APPLICANT: Desauvage, Frederick
APPLICANT: Henner, Dennis, J.
TITLE OF INVENTION: No. 6555343e1 chimpanzee erythropoietin (chepo)
TITLE OF INVENTION: polypeptides and nucleic acids encoding the same FILE REFERENCE: GENERY: 05776P1
CURRENT FILING DATE: 2000-04-19
PRIOR APPLICATION NUMBER: US 09/307307
PRIOR FILING DATE: 1999-05-17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .

Sequence 2, Application US/09552265B

Patent No. 655343

GENERAL INFORMATION:

TAPLICANT: Desauvage, Frederick

APPLICANT: Debauvage, Frederick

TITLE OF INVENTION: No. 655343el chimpanzee erythropoietin (chepo)

TITLE OF INVENTION: Dolypeptides and nucleic acids encoding the same FILE REFERENCE: GENERAL .05/09/552,265B

CURRENT APPLICATION NUMBER: US/09/552,265B

CURRENT PILING DATE: 2000-04-19

PRIOR APPLICATION NUMBER: US 09/307307

PRIOR APPLICATION NUMBER: US 09/307307

NUMBER OF SEQ ID NOS: 49

SOFTWARE: FastSEQ for Windows Version 4.0

LENGTH: 193

Sequence 227, Application US/10360101

GENERAL INFORMATION:
APPLICANT: Leenhouts, Cornelis J.
TITLE OF INVENTION: Export and modification of (poly) peptide in the lantibiotic way
FILE REPERENCE: 2183-5673

CURRENT APPLICATION NUMBER: US/10/360,101

CURRENT FILING DATE: 2003-02-07

PRIOR FILING DATE: 2002-05-24

NUMBER OF SEQ ID NOS: 309

SOFTWARE: Patentin version 3.1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ద
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g Tregulation of erythropoletin is the principal hormone involved in the regulation of erythrocyte differentiation and the maintenance of a physiological level of circulating erythrocyte mass.

Tregulation of erythrocyte differentiation and the maintenance of a physiological level of circulating erythrocyte mass.

Tregulation of erythrocyte differentiation and the maintenance of a physiological level of circulating erythrocyte mass.

Tregulation of fetal or neonatal mammals.

TISSUE SPECIFICITY: Produced by kidney or liver of adult mammals or the names Epogen (Amgen), Epogin (Chugai), Epomax (Elanex), Eprex the names Epogen (Amgen), Epogin (Chugai), Epomax (Elanex), Eprex (Ortho Biocech). Variations in the glycosylation pattern of EPO distinguishes these products Epogen, Epogin, Eprex and Procrit or epoetin beta and Epomax as epoetin alfa, NeoRecormon and Recormon as epoetin beta and Epomax as epoetin of EPO (TPO family.

The SIMILARITY: Belongs to the EPO (TPO family.

The SIMILARITY: Belongs to the EPO (TPO family.

The SIMILARITY: MAME=RED Systems.com/asp?comerce book: EPO).

The SIMILARITY: Produced and pomax as epoetin alfa, NeoRecormon and Recormon and R

Ronkey erythropoietin gene: cloning, expression and comparison with

Un che human erythropoietin gene: ",

Gene 44:201-209(1986).

Le FUNCTION: Erythropoietin is the principal hormone involved in the

regulation of erythrocyte differentiation and the maintenance of a

physiological level of circulating erythrocyte mass.

Lessure Subcellular Location: Produced by kidney or liver of adult mammals

C - Subcellular Locatiff: Produced by kidney or liver of adult mammals

C - Alssyn Specificity: Produced by kidney or liver of adult mammals

C - SIMILARITY: Belongs to the EPO / TPO family.
                                                                                                                                                                                                 Macaca fascicularis (Crab eating macaque) (Cynomolgus monkey).
Wakaryota: Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Cercopithecidae;
Cercopitheciae; Macaca

Erythropoietin structure-function relationships: high degree of
sequence homology among mammals.";
Blood 82:157-1516(1993).
-: FUNCTION: Brythropoietin is the principal hormone involved in the
regulation of erythrocyte differentiation and the maintenance of a
physiological level of circulating erythrocyte mass.
-: SUBCELLUAR LOCATION: Secreted.
-: TISSUE SPECIFICITY: Produced by kidney or liver of adult mammals
and by liver of fetal or neonatal mammals.
-: SIMILARITY: Belongs to the EPO / TPO family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1; Gaps

"Erythropoietin structure-function relationships: high degree of sequence homology among mammals.";
Blood 82:1507-1516(1993)
-! FUNCTION: Erythropoietin is the principal hormone involved in the regulation of erythrocyte differentiation and the maintenance of a physiological level of circulating erythrocyte mass.
-! SUBCELBUIGHER LOCATION: Secreted.
-! TISSUE SPECIFICITY: Produced by kidney or liver of adult mammals and by liver of fetal or neonatal mammals.
-! SIMILARITY: Belongs to the EPO / TPO family.
